Abstract
Indonesia is an agricultural country because most of the population has a livelihood in agriculture. In addition, agriculture is the second largest contributor to national economic growth and Gross Domestic Product (GDP). Rural areas have vast agricultural land, but not all communities have land so most farmers work on land owned by other people and then get a share of the results by a variety of methods. The research objective is to analyze the implementation of muzāra’ah contract based on Law No. 2 of 1960 and Islamic law and its implications for the socio-economic life of the society in Cianjur. Data collection was carried out using the method of observation, interview and documentation (library) and data analysis deductively, inductively and comparatively, then presented in a qualitative descriptive manner. The population in this study was 120 people, and the study sample was 12 people (10%) who were selected by purposive sampling method. The results of the research are (1) the implementation of muzāra’ah contract in Cianjur, West Java is not fully in accordance with Law No. 2 of 1960 and Islamic law, (2) The implications of muzāra’ah on the economic life of farmers are the fulfillment of ḍarūriyyah needs, namely consumption and secondary education, while landowners can meet more complex needs, including fulfillment of ḍarūriyyah, can allocate part of the funds to go on pilgrimage, charity to other people in need. And (3) The Implications of muzāra’ah contract on the social life of society is a concern between landowners and farmers that is realized by helping each other when in trouble. However, attention from the government is still needed to ensure good relations between the two parties that are cooperating

Keywords: Muzāra’ah Concept, Socio-Economic Society, Cianjur

Abstrak
Indonesia merupakan negara agraris karena sebagian besar penduduk mempunyai pencaharian di bidang pertanian. Selain itu, pertanian merupakan kontributor kedua terbesar terhadap pertumbuhan ekonomi nasional dan Produk Domestik Bruto (PDB). Daerah pedesaan mempunyai lahan pertanian yang sangat luas, namun tidak semua masyarakat mempunyai lahan sehingga sebagian besar petani menggarap lahan milik orang lain kemudian mendapatkan bagi hasil dengan metode yang beragam. Tujuan penelitian adalah untuk menganalisis pelaksanaan konsep muzāra’ah berdasarkan UU No. 2 Tahun 1960 dan hukum Islam dan implikasinya terhadap kehidupan social ekonomi masyarakat di Cianjur. Pengumpulan data dilakukan dengan metode observasi, wawancara dan dokumentasi (perpustakaan) dan analisis data secara deduktif, inductif dan komparatif, kemudian disajikan secara deskriptif kualitatif. Jumlah populasi dalam penelitian ini 120 orang, dan sampel penelitian sebanyak 12 orang (10%) yang dipilih dengan metode purposive sampling. Hasil penelitian adalah (1) pelaksanaan perjanjian bagi hasil akad muzāra’ah di Cianjur belum sepenuhnya sesuai dengan UU No. 2 Tahun 1960 tentang perjanjian bagi hasil lahan pertanian dan hukum Islam dalam kerjasama pertanian. Hambatan dalam melaksanakan peraturan No 2 Tahun 1960 dan hukum Islam dalam kerjasama pertanian adalah
Introduction
Ownership of agricultural land and inequality in rural areas is not a new issue. Since the beginning of the 20th century the Dutch government has realized this. Through a survey conducted in 1903, showed that almost half of the farmers controlled the land less than 0.50 hectare.1 This condition has not changed much, due to the increasing population and is not offset by the addition of agricultural land. It can be seen from the results of the 1993 agricultural census, for example, that farmers who have land less than 0.50 hectare are around 29%. Agricultural land in the countryside is still very broad, but not all villagers as farmers have land so that most farmers work as farm laborers. The value of mutual cooperation can be used positively in life to mobilize community solidarity so that the Indonesian people are able to face the challenges of changing times, globalization and various things that threaten people's lives such as natural disasters, social and political conflicts. 2

Of the thousands of islands that make up Indonesia, Java because of its central location, perhaps the most affected by foreign culture. One form of community cooperation in the agricultural sector is that landowners involve farmers by leasing, paying wages, and making profit sharing arrangements. In this collaboration the people who own the land will give permission to other people to process it, then the results are divided between the land owner and the farmer based on an agreement between the two parties. There are two forms of community agricultural activities, namely rice fields and fields that present the ecology of Java and outside Java.3 Irrigated land area requires labor to develop intensively into population concentration. But this does not mean that life can be said to be harmonious. According to Schrieke, there are three incentives for farmers to increase production because the production process is given to the royal family and the bureaucracy in the palace. This tribute must be given because the kingdom has been instrumental in building construction and maintenance of irrigation and road channels, security guarantees, as well as the provision of rice barn buildings. As a result the life of farmers is under pressure from the kingdom. The structure of society at that time was relatively more egalitarian, both economically and socially. This assumption of undifferentiated, egalitarian and stagnant Javanese society also dominated the colonial government at that time.4 According to Husken and White, Javanese

---

3 C. Geertz, Involusi Pertanian; Proses Perubahan Ekologi di Indonesia (Jakarta: Bharata K.A, 1976), p. 90
society has historically been divided into agrarian classes which are divided into land tenure and commercialization. That is, the nature of the village community in the pre-colonial era which is very egalitarian and full of romantic intimacy is not true. Both forms require an effort or strategy that must be taken by farmers either by maintaining ownership or access to land that is controlled or the way to cultivate it in farming.5

Economic development in urban areas tends to contradict the level of income of rural communities. This affects the decreasing level of land ownership in rural areas. The negative impact of this development is the accumulation and concentration of land ownership to a group of people in urban areas. The process of land accumulation and concentration further increases the frequency of violations of land ownership and social inequality between landowners and farmers.6

Inequality of land ownership is also a source of injustice. When agricultural land shrinks and inequality is not resolved, there will be a crisis of food availability. Food security as the goal of agricultural development is very dependent on the availability of agricultural land and the fairness of ownership and utilization for farmers.7 The current symptom shows the tendency of farmers to cultivate agricultural land instead of their own land, but work on the land of other people who live in urban areas with a profit sharing system. The profit sharing system is preferred to the rental system because the profit sharing system is most likely to be done by farmers and they do not have the ability to pay rent that must be paid in advance and the cost of working on the land.

The profit and loss sharing agreement is regulated by the government in Law No. 2 of 1960, in general is an agreement made between landowners and someone or an institution (farmer) where farmers are allowed by the landowners to carry out agricultural business on their land by dividing the results agreed by both parties. Profit sharing is the result of an agreement between the two parties on a voluntary basis and not coercion. For cultivators, they can cultivate land owned by other people without having to own their own land and get the agreed-upon results. Revenue sharing has two positive and negative implications, the causes of poverty in tenants are influenced by the existence of these local institutions, the economic business performance carried out and the appropriate empowerment model to be applied.8

But in this case not all land owners are fair to farmers, because the position of farmers is weak and most do not have other skills to find work. Injustice carried out by landowners is that farmers cannot cultivate the land properly, so this makes the landowners request the land to be processed before the agreement has been agreed upon. The agreement on agricultural land, especially rice, is not the land which is the main objective, but about the work and yield of the land (in this case, rice) and the workers who work on it. It turns out that doing so for agricultural products not only can fulfill the material needs but also can improve social and economic life among the actors of agricultural profit and loss sharing.

Agricultural profit and loss sharing agreements are regulated by Law No. 2 of 1960, regulates the agreement so that the profit sharing between landowners and farmers is carried out on the basis of fairness and guaranteed proper legal position for farmers by affirming the rights and obligations

6 Ibid., p. 136.
between the two. This regulation explains the guidelines for the implementation of the profit sharing contract which includes; (1) Subject of agreement, (2) Object of agreement, (3) Form of agreement, (4) Term of agreement, (5) Transition and expiration of agreement, (6) Distribution of results and (7) Obligation of land owners and tenants. Whereas in Islamic law, cooperation in agriculture is called the three terms namely musāqa, muṣāra’ah and mukhābarah. Akad musāqa, is a contract of cooperation between the owner of the garden and the farmer with the aim that the garden can be maintained and cared for so that it provides maximum results, then part of the yield becomes part (wage) for farmers in accordance with the agreement.

Musāqa cooperation is different from hiring gardeners to take care of plants, because the results they receive are not wages that are definitely the size of a gardener, but from garden produce which is not necessarily the size. Whereas the contract of muṣāra’ah and mukhābarah is a contract of cooperation between the landowner and the farmer, where the landowner surrenders the land to the farmer to manage, then the results will be shared between them.10 Whereas according to Mālikī, al-muṣāra’ah is a contract of profit sharing in agriculture that occurs between landowners and farmers.11 Shāfi‘ī interpreting you as a contract signed between the land owner and the farmer who will carry out the work of planting and guarding it, then will get a portion of the results, while the seed used is the property of the landowner.12 Ḥanbalī also argues, that muṣāra’ah is a contract to hand over land to a farmer to be cultivated and the results will be divided between landowners and farmers.13

Based on the definitions that have been described, it can be concluded that the concept of muṣāra’ah is a concept of sharing the results

**Definition of Muṣāra’ah**

Al-muṣāra’ah in Arabic comes from the word ẓara’a ara’a, which is a planting or agricultural activity by sharing between landowners and farmers to get results. The result will be shared between the two parties based on what has been agreed in the contract or ‘uruf.9

According to the Sharia perspective, there are several definitions proposed by the fiqhah’. According to Ḥanafi al-muṣāra’ah is a contract for the production of crops carried out jointly between the landowners and farmers through the distribution of crop yields among them as agreed. Landowners may pay farmers or rent their land to farmers, and the results obtained will be shared between them.10 Whereas according to Mālikī, al-muṣāra’ah is a contract of profit sharing in agriculture that occurs between landowners and farmers.11 Ḥanafī interpreting you as a contract signed between the land owner and the farmer who will carry out the work of planting and guarding it, then will get a portion of the results, while the seed used is the property of the landowner.12 Ḥanbalī also argues, that muṣāra’ah is a contract to hand over land to a farmer to be cultivated and the results will be divided between landowners and farmers.13

Based on the definitions that have been described, it can be concluded that the concept of muṣāra’ah is a concept of sharing the results

---

between landowners and farmers. The land owner surrenders the right to manage the land owned by the farmer and the proceeds will be distributed between the parties involved based on the agreed contract.14 In principle, the concept of al-muṣāra‘ah resembles the concept of muḍārabah. However, the difference between the two is the division of the results of muṣāra‘ah contract is the division of the crop and not the profit as contained in muḍārabah principle.15

Law of Muṣāra‘ah

Fuqahā’ have different opinions in discussing the muṣāra‘ah contract. There is a view that allows and there are other views that do not allow this contract

A. Opinions that do not allow

Abū Ḥanīfah and Zufar Ibn Hudail al-Kūfī (pakar fiqh Ḥanafi) argue that muṣāra‘ah contract is not permitted. According to them, muṣāra‘ah with profit sharing like ½ dan ¼ the law is canceled.16 Syāfi‘i also argue that muṣāra‘ah is not valid, only the scholar Syāfi‘i think that muṣāra‘ah is legitimate if follow with musāqāh, for example if there is cooperation in plantation management, then there is a vacant land that can be used for muṣāra‘ah, then according to scholar Syāfi‘i muṣāra‘ah contract can be done but this contract does not stand alone and must follow with musāqāh.17 Although opinions do not allow the application muṣāra‘ah, but they state that the lease of land is legitimate and justified. This opinion is based hadith “From Zaid bin said: The prophet Muhammad forbade from applying al-mukhābarah. I asked: what is al-mukhābarah? The prophet Muhammad answered: Someone who makes (rents) the land with a result of ½, ¼ or ¼ (HR Abū Dāwūd).”18

Abū Ḥanīfah does not allow muṣāra‘ah application based on the Prophet Muhammad’s ban on the application of mukhābarah namely land leasing. Abū Ḥanīfah also believes that the transaction of the Prophet Muhammad with population of Khair bar is a tax, namely a provision that must be paid by the peasant to the Prophet Muhammad every harvest with a certain level (kharaj al-muqāsamah) and not muṣāra‘ah contract. The Government has the right to taxes (kharaj) from the population and this is justified.19

Khair bar is a city on the Arabian Peninsula which was opened by Muslims under the leadership of the Prophet Muhammad in the 7th year of Hijrah. In the war, the Prophet Muhammad had won without the enactment of bloodshed. All the property of the Jews in Khair bar included land, date palms and wine made as spoils of war by the Prophet Muhammad.20 According to Abū Ḥanīfah, muṣāra‘ah it is not permissible because muṣāra‘ah object still doesn’t exist (al-ma’dīm) and it’s not clear in size (al-jahālah). If agricultural cooperation does not get results, the farmers as managers do not get anything and cause losses. Therefore, you are considered invalid because the contract object (land benefit) is unclear and still does not exist.21 Abū Ḥanīfah also stated

---

---

that muţâra‘ah application is only allowed if the business or work and seeds are joint property rights. So, this means that farmers rent land with their tools and landowners pay farmers by providing equipment and seed plants.22

Scholar of Syâfi‘i also agree with Abū Ḥanīfah which states that mukhābarah is a prohibited contract. In their opinion, this contract is prohibited and canceled because the seed of the plant is provided by the manager. Based on this situation, the landowner is only involved in managing the land and is not entitled to a profit sharing.23 Fuqahā’ from Syâfi‘i just justify muţâra‘ah if it is preceded by a contract of musāqah. This means that the land in the contract must have fruiting trees or vacant land between the fruiting trees. So if there has been a contract of musāqah, then muţâra‘ah contract is justified.24

Therefore, the fuqahā’ of the School of Syâfi‘i does not require rental of land mixed with agricultural produce. Because agricultural produce is the whole right of the landowner because he develops his property, but the landowner is responsible for paying wages to farmers including animal rent and the tools used. The method that can be made based on the opinion of Syâfi‘i is the way land owners and farmers share in providing seed and both parties manage agricultural land together. In this way, both parties are involved in work and seed matters. Therefore, farmers benefit from the results obtained and the landowners benefit from the results obtained and land ownership.25

B. Allow opinion

The opinion which states that this contract is permissible is composed of groups of. Fuqahā’. They consist of (1) Aḥmad Ibn Ḥanbal, (2) Abi Laylā Ibn Sa‘īd, (3) Abū Yūsuf, and (4) Muhammad al-Syabānī.26 The opinion of the scholars who allow is to refer to ḥadith dan juga ijmā‘; i) The proposition of al-Sunnah: “It is narrated from ‘Abd Allâh bin ‘Umar said:’ The Messenger of Allah blessed the people of Khaiبار with half of what was produced, which consisted of fruits and plants.27 And “From Ibn Abbâs, that the Prophet Muhammad surrendered the land to the inhabitants of Khaiبار and the tamar tree by sharing muqasamah (as many)”.28

Whereas ii) The reason Ijmâ‘, The friends who require the implementation of muţâra‘ah are as follows:

1. Al-Bukhârî there is a narration that ‘Ali bin Abī Ṭâlib, Sa‘ad Bin Mâlik, ‘Abd Allâh Bin Mas‘ûd, ‘Umar Bin Abî Azîz, al-Qâsim al-‘Urwa, keluarga Abû Bakar al-Ṣiddîq, the family of ‘Umar al-Khaṭṭâb, family ‘Ali bin Abî Ṭâlib and Ibn Sirîn have done the concept of muţâra‘ah.29

2. Said Abû Ja‘afar bin ‘Ali bin Ḥassan bin Abî Ṭâlib: The Messenger of Allah blessed the people of Khaiبار with a result of ½. Then followed by Abû Bakar al-Ṣiddîq, ‘Umar bin al-Khaṭṭâb, ‘Uthmân bin ‘Affân and ‘Ali bin Abî Ṭâlib and then followed by their family experts so that it gives ½ or ¼.30

28 Abî ‘Abd Allâh Muhammad bin Yâzîd al-Qazwînî (t.t), Sunan Ibn Mâjâhî, Kitâb al-Rahn, Bâb al-Mu‘âmahalâ al-Nakhlâ wa al-Kurm, no. 2468.
30 Abî Dâwûd Sulâyâmîn Ibn al-As‘âth (1988), Sunan
This was done by the Prophet Muhammad so he died. Then, practiced by the friends so they died and were followed by the courtiers. Madinah residents also applied this, so the wives of the Prophet Muhammad also carried out the implementation. Based on the traditions of the Prophet Muhammad and also al-ijmā’, the group that allows the application of muzāra’ah states that muzāra’ah contract is a contract that can be applied at this time. Abū Yūsuf and fuqahā’ is permissible. Their view is based on the principle of ḍ muāra’ah. This contract is a two-party distribution contract, that is a party provides capital, and one party again provides labor which is analogous to the principle of muḍārābah.

The application of muzāra’ah contract is permissible because it pays attention to human needs for it and the prohibition on freezing assets in Islam. In fact, this contract is suitable to be applied in agriculture because sometimes land owners cannot manage the land properly. This situation causes landowners to need farmers to manage their land. Besides, al-Syarbīnī also have written about the ability of muzāra’ah contract. He stated that there may be people who own land but are unable to manage the land, even though there are also other people who are able to manage the land. Then there are two requirements, namely the need to manage the land for the land owners and also the work needs for those who want to manage the land. This is permissible because if the land owner wants to hire someone else to manage the land, then he must pay wages to the farmer and there is also the possibility of the landowner not getting results due to farmers laziness.

Al-Jazīrī combine both opinions and choose one that is more useful and useful to society. He allows this system if there are values of justice, agreement, honesty and good intentions from both parties to help each other and there is no element of oppression and deprivation of rights. From this opinion it can be stated that there are two forms of muzāra’ah, which are permissible and which are not permissible, which depends on the condition of the community which can be assessed in terms of its benefits and goodness.

**Pillars of Muzāra’ah**

Jumhur fuqahā’ the one that allows muzāra’ah to explain some of the pillars that must be fulfilled in muzāra’ah contract. These pillars must be fulfilled so that muzāra’ah contract becomes valid. The pillars are (1) land owners, namely people who have agricultural land to be cultivated by farmers, (2) Farmers, namely people who provide power to work on agricultural land, (3) Object of the contract, namely the benefits of land and the work of farmers and (4) Ijāb (expression of land handover from land owners) and gabūl (statement accepting land to be managed by farmers). Fuqahā’ of Ḥanafī stating the harmony of muzāra’ah contract this is only one that is šīghah meaning ijāb (submission) and gabūl (acceptance). If the landowner makes an offer to the farmer, like saying, “I leave this land for muzāra’ah contract and the results will

---

**Notes:**

32 Abū Yūsuf (1392 H), Al-Ṭuṣ̄ al-Thuluth wa al-Rūbū’, no 2462.  
33 Abū Yūsuf (1392 H), Al-Ṭuṣ̄ al-Thuluth wa al-Rūbū’, no 2462.  
be shared between the two of us”. The farmer accepts the offer by saying, “I accept or agree” or whatever words show to willingness”.37

Requirements of Muğāra’ah

There are several conditions that must be met to determine the validity of muğāra’ah contract. The conditions for muğāra’ah contract can be categorized in several parts, namely:38

A. Understanding of Conditions of Muğāra’ah

For people who commit a contract it is required that both must be intelligent and illegitimate if they are crazy or children who are not intelligent. Another opinion from the scholar of Ḥanafī added that one or both of them were not apostates.39 However, according to Abū Yūsuf and Muhammad Ibn Ḥāsan al-Syaibānī did not approve these additional terms, because according to them muğāra’ah contract may be done between Muslims and non-Muslims including apostates.40

According to Mālikī, muğāra’ah application is not permitted unless it has certain conditions, namely:41

i. Both people who have the intention must give each other the object of the contract. Landowners hand over land and farmers try to manage. If there is no handover, then muğāra’ah application is prohibited.

ii. Both parties who are willing to accept each other must receive the results obtained with a certain size. The results obtained must be in accordance with the farmers and in accordance with the agreed agreements.

iii. Let there be similarities in receiving benefits from the distribution of these results; and

iv. Seed must be planted on land that has been stated in the contract.

B. The Plant Conditions of Muğāra’ah

The types of plants that will be managed by farmers must be notified to the land owner. This step is carried out to ensure the types of plants that will be managed according to the type of land, and avoid the reduction of results. This requirement is excluded if the landowner allows farmers to plant any plants without conditions.42

C. The Harvest Conditions of Muğāra’ah

All results obtained from the collaboration must be distributed based on the level determined and agreed upon in the contract by both parties so that no disputes arise. Determination is also not allowed to be based on a certain amount absolutely because the possibility of all results not exceeding the amount that has been set or more than the specified amount. Division of production must be made in the contract. If not stated in the contract, the contract is invalid.43 According to the book of Fatḥ al-Barī, the distribution of results is guided by the implementation of the Prophet Muhammad. The people of Madinah who carry out this contract have shared the results in the ⅓ or ¼. Sa’ad bin Mālik and Ibn Mas‘ūd have carried out muğāra’ah contract by ⅓ or ¼.44 Likewise, according to Abū Yūsuf stated that the distribution of crop yield is based on agreed levels such as ½ or ⅓. All of that is required because the results are not known to experience profits or losses as in muḍārabah contract.45 Distribution of the harvest is done from the beginning of the contract so that it does not cause disputes later.

39 Ibid.
44 Ahmad bin ’Ali bin Ḥajar al-Asqalānī (t.t), Fatḥ al-Bārī, Juz 5 (Meṣhr: Maṭba‘ah Muṣṭafā al-Bābī al-Ḥalabī wa awlāduhu), p. 11
45 Abū Yūsuf (1392 H), Op.Cit, p. 22
D. The Land Conditions of Muẓāra‘ah
The land that is going to be muẓāra‘ah place agriculture should be in good condition. Muẓāra‘ah contract is not valid if the land is in a dry, barren condition and is not suitable for agricultural land. However, if when muẓāra‘ah contract is done, the land is not suitable for agricultural land because it is cut off from the water source, but in the future it is also suitable as agricultural land, so it is permitted.46 The landowner must inform the land to be used as a farming place and the pengola must know the land to be used because of muẓāra‘ah illegitimate agreement with unknown land.

E. The Time Conditions of Muẓāra‘ah
The term of time muẓāra‘ah contract should be determined and in accordance with the type of plant and also based on local circumstances. Estimates of acquisition must not be too long so that for many years because of the possibility that one of the contracting parties will die.47

F. The End Conditions of Muẓāra‘ah
This contract will expire if; (1) The agreed period expires. However, if the period has expired while the agricultural products are not yet harvestable, the contract is not canceled until harvest and the results are divided according to the collective agreement during the contract. Therefore, in waiting for harvest the farmers are entitled to receive wages in accordance with the minimum wage that applies as a local farmer. Furthermore, in waiting for the harvest period the costs of crops, such as fertilizer, voting and irrigation costs are the joint responsibility of the landowners and farmers in accordance with the percentage of each division, (2) According to the fuqahā’ of Ḥanafi and Ḥabali, if one of the dead dies, then muẓāra‘ah contract cannot be inherited. But the scholars of Mālikī and Syāfīʿī think that muẓāra‘ah contract can be inherited. Therefore, the contract does not end with the death of one of the parties who act, (3) There is a party Uzur, both from the landowners and farmers which causes them to not be able to continue muẓāra‘ah contract. The Uzur is, among others, a) The land owner is bought by debt, so that the agricultural land must be sold. Because there are no other assets that repay the debt. This cancellation must be carried out through the intervention of a judge. However, if the plant has produced fruit but is not yet worthy of harvesting, then the land cannot be sold before harvest and b) the aging of the farmer, such as being sick or having to travel so that he is unable to carry out his work.48

Research Methodology
The data collected in this results sharing implementation research system is in the form of words and explanations (not numbers), so the basis of this research is to use a qualitative case study method. This research method is used to understand events, events, actors in certain situations that are natural or natural.49 Primary data collection in this study was carried out by observation and interviews with landowners and farmers in Cianjur, while secondary data was carried out using documentation and library methods. Then the data that has been collected will be analyzed by inductive, deductive and comparative methods. The location of the study was conducted in Cianjur on the grounds that most of the population entered into production sharing agreements (muẓāra‘ah contract). Research focuses on three problems, namely; the implementation of the sharing of muẓāra‘ah contract based on Law No. 2 of 1960 and Islamic law, and Its implications for the socio-economic of the society tin Cianjur. The informants in this study were divided into two key informants and

---

47 Abī Muḥammad ʿAbd Allāh bin AḤmad Ibn Qudāmāh (t.t), Op.Cit, p. 589-590.
supporting informants. Key informants are land owners and farmers or who carry out muṣāra‘ah contract, while supporting informants are community leaders such as village heads, sub-district heads, village officials and surrounding communities who can provide information related to this research. The population in this study was 120 people, and the study sample was 12 people (10%) who were selected by purposive sampling method. The criteria for determining informants in this study are; (1) The landowners and farmers are in Cianjur, (2) those who pursue the cultivation of paddy, (3) Total land area is done less than 1 hectare.

The Implementation of Muṣāra‘ah Contract in Cianjur, West Java

1. The Existence of Muṣāra‘ah Contract

Muṣāra‘ah contract, known as maro in Cianjur, is a custom and habit that is carried out from generation to generation in the local environment. So that the custom will continue to develop and become a legal rule that is not written, such as kaedah fiqhiyyah above. The existence of the maro customs is used as ‘urf because its existence does not conflict with the provisions of sharia, does not have a negative impact even with the maro method it creates a similar good because of the principle of helping, does not apply to the whole Muslim because of its existence only in certain areas only, so that these customs can be used as ‘urf which is one source of law. The existence of cooperation with the concept of maro (muṣāra‘ah) in cultivating agricultural land is a method implemented by the Cianjur people of West Java due to several factors, some communities have no land and they have expertise

2. Mechanism

The implementation of the profit sharing system for maro (muṣāra‘ah) in Cianjur is not clearly stated in the period of time, whether only one harvest season, two times or another. So the practice can be said to be invalid according to the fiqahā‘ and can be said to be legitimate in the opinion of Ḥanafi.

3. Subjects dan Object

The subject of the agreement in the contract of muṣāra‘ah in Cianjur, West Java, namely the farmer and land owner. While agricultural land, rice and labor are the object of agreement in muṣāra‘ah contract.

4. Financing cooperation

The implementation of muṣāra‘ah contract that occurred in Cianjur, namely; (a) agricultural land, seeds and costs to be managed come from land owners, while management and voting come from farmers, and (b) agricultural land to be managed comes from land owners, while equipment, labor and costs and management are from farmers. Based on the reality that occurred in Cianjur, the implementation of the muṣāra‘ah carried out by the Cianjur people as seen from the capital (seeds) was partly in accordance with Islamic law, and all of that was done based on voluntary and no coercion.

5. The Implementation of profit and loss sharing

Based on several facts above, the distribution of rice farming with the concept of maro (muṣāra‘ah) in Cianjur can be explained as follows; if the contract is clear between the land owner and the farmer before the work is done, for example using ½, then the entire morning harvest is divided into 2, which is ½ for the land owner and ½ for the farmer with origin, maintenance and production costs. For example in the cultivation of a land area of 1 ha, with the overall cost borne by the farmer and the yield of 6 tons of grain. Then the distribution of the results of each party gets 3 tons.\(^\text{50}\) However,\(^\text{50}\) In the case of division with the determination at the beginning of this agreement carried out by farmers, among others by Majran Haris and Susilawati, while Ilman, Sahini, Hilmi and Munharis used an unspecified
if the division of agricultural produce is not determined at the beginning, then the one who determines the distribution of the results is the landowner by considering the humanitarian factors and the energy released by the farmers so that in this case the farmers tend to get the distribution of crops that are not too much and harmed, this is a habit of local people.

The reason stated is that the reduction in the cost of cultivating land against the results that have not been divided is the return on capital in the form of seeds and fertilization and drugs. Cultivation that has been done should be used again for further planting so that at the beginning of planting again it is not difficult to find costs, but it should be underlined that this kind of thing happens if the landowner and farmer do the maro agreement (muẓārah), meaning both sides the parties agreed to continue cooperation. The implementation of the concept (muẓārah) that occurred in Cianjur was seen from the perspective of Islamic economics. Where Islamic economics is part of a complete living system based on Islamic law sources, namely the Qur’ān, Ḥadīth, Ijmā’ and Qiyās. So that in taking the law in the Islamic economy must be based on the four sources, so that the law is taken in accordance with the principles and philosophy contained in the Islamic economy.

All human activities must be based on Islamic economic principles and philosophy, namely:

a. The principles of tauḥīd and brotherhood

The implementation of muẓārah contract in Cianjur is carried out based on the principle of monotheism and brotherhood. This can be seen from the way they transact and trust each other in the contract. Besides that with the existence of this agreement, the brotherhood between landowners and farmers will be in harmony.

b. The principle of working and productivity

In the implementation of muẓārah contract in Cianjur indirectly contains the principle of work and productivity, because farmers are required working optimally to get the maximum results too, namely the results that are feasible and beneficial to both parties.

c. Fair distribution of wealth principles

The concept of muẓārah in Cianjur is a form of wealth distribution because landowners who give up land from people are well off, while the majority of farmers come from the middle to lower class who depend their lives on agriculture. Islam regulates all human activities, in the legal, social, political and economic fields. In the field of distribution of Islamic principles about justice plays a very important role. Islam guarantees a fair distribution of wealth between all humans. Justice in distribution demands economic resources and wealth must be distributed among members of the community.

Based on the above analysis, it can be concluded that the concept of muẓārah in Cianjur is reviewed from the perspective of Islamic economics, starting with the basic principles and also the principles of existing Islamic economics. Then muẓārah concept is a good concept to be applied in the modern world today. But what must be a concern is muẓārah contract with all the consequences described in the book of fiqh is the application of ancient times. For example in terms of seeds, in the past seeds were seen as valuable in determining this kind of agricultural cooperation, and also in the past the cost of treatment from the beginning of planting so that the harvest was not too heavy. However, now, the problem of seeds becomes an ordinary one, even when compared to the cost of treatment from the beginning of planting so that the harvest is not much, therefore there must be improvements regarding the procedure in muẓārah contract.
### Table 1:
The Implementation of *Muzāra‘ah* Contract in Cianjur, West Java
According to Law No. 2 of 1960 and Islamic Law

<td>Risk of Harvest Failure</td>
<td>The majority is borne by farmers (95.24%) Only 4.76% is borne entirely by landowners</td>
<td>Not Fully Compliant;</td>
</tr>
</tbody>
</table>

**Source:** Primary Data
The implementation of the agreement for the results of mu'azzara'ah agreement in Cianjur is not fully in accordance with Law No. 2 of 1960 concerning agreements for the sharing of agricultural land and Islamic law in agricultural cooperation. Obstacles in implementing regulation No. 2 of 1960 and Islamic law in agricultural cooperation are as follows: There is no socialization from any party related to Law No. 2 of 1960 concerning agreements for the production of agricultural land and Islamic law in agricultural cooperation. There are habits that have been going on for generations. Landowners and farmers do not want to use troublesome methods, for example by writing, but if it is written it is feared to cause mutual distrust and mutual suspicion between landowners and farmers. From the point of view of the landowner, the majority have felt good and fair with the usual profit sharing system. Whereas from the point of view of the farmers the majority feel unfair, but still implement it because the system is already common in the community.

The Implication of Mu'azzara'ah Contract on Community Social Life in Cianjur West Java

Rural communities who generally only depend on their livelihood from agricultural products, where their level of welfare varies. Some of them have their own land to cultivate which varies in size. But there are also those who do not have their own land to cultivate so that in order to meet their needs, they collaborate with those who own land in return for profit sharing. Or even those who have their own land but because the results are not sufficient, they also work on other people's land in return for profit sharing. There are landowners who have very small land but cannot work on it for a reason so that the cultivation is represented to others by obtaining a portion of the results. Conditions like this are generally seen in our rural communities today.

Therefore, the processing system of agricultural land with mu'azzara'ah share of benefits is growing in rural communities in general. Because basically humans are not the same, each person's personality and abilities are different and have various desires (al-Nahl, 16:71). Therefore, it is necessary to develop an advanced and prosperous society so that mutual trust and cooperation can grow in the community. In society, everyone has dependency with others to fulfill their needs. Often someone has the will to process it. The same can be said about the transfer of wealth, for example someone who has enough time to trade (another business) or does not have the ability and strength to shoulder the burden of trading difficulties (or other business), or be bound by a higher job and unable to cultivate the land own. Therefore it is necessary to help each other so that by giving the wealth that is owned (capital or land) to others can share profits with them. (al-Nahl, 16: 276).

This system becomes important when there are people who have expertise but do not have land and while others have land without capital and labor. Based on these conditions by mutual assistance and cooperation, the profit sharing system is an effective way to produce more land that is processed to benefit both parties. For those who do not have land but have the ability, this system will open job opportunities which can then increase income that has an impact on the welfare of both parties. In addition, there will also be a stronger sense of brotherhood because each party feels that they need each other. A landowner may not have time to cultivate the land because it is occupied by other things, while on the other hand, a farmer needs land that can be cultivated and he does not have the land.

mu'azzara'ah system of is actually already known and practiced by the people of Indonesia, which may be in various terms. The application of this system in general can be seen in rural
communities whose lives rely on agriculture. Because this system will help cooperation between landowners and farmers based on a sense of brotherhood between the two parties. It is no exaggeration that the authors argue that this system can continue to be applied by not ruling out the values of justice and humanitarian norms.

The Implication of Muẓāra’ah Contract on Community Economic Life in Cianjur West Java

Farmers in Cianjur, West Java, are only able to meet the needs of ḍarūriyyah, namely the standard for fulfilling basic needs, some consumption and some of which focus more on the education of their children. The level of fulfillment in religious guarding standards (ḥifẓ al-dīn) is that it can fulfill zakat as a religious obligation, safeguarding the soul (ḥifẓ al-nafs) that is fulfilling the need to eat drinking as a provision in performing worship, and keeping offspring (ḥifẓ al-nasab dan ḥifẓ al-aql) is the fulfillment of the education of their offspring. While landowners are able to meet the needs of ḍarūriyyah, they are able to give charity and pay tithe to others who need help, and can allocate the profit sharing to increase the cost of going for Hajj (ḥifẓ al-dīn), in terms of soul and mind maintenance (ḥifẓ al-aql) the land owner allocates the results of the cooperation in cultivating the rice fields as a stock or stock of rice for a certain period of time (ḥifẓ al-nafs), then the landowner plans to use the agricultural products as a form in terms of preserving property (ḥifẓ al-māl), while in terms of keeping offspring (ḥifẓ al-nasab) the landowners prioritize the business that is managed with capital obtained from the sale of the harvest.

Conclusion

Based on the results of research that has been done, it can be seen that (1) the implementation of the agreement for the results of muẓāra’ah contract in Cianjur is not fully in accordance with Law No. 2 of 1960 concerning agreements for the sharing of agricultural land and Islamic law in agricultural cooperation. Obstacles in implementing regulation No. 2 of 1960 and Islamic law in agricultural cooperation are no socialization from any party related to Law No. 2 of 1960 concerning agreements for the production of agricultural land and Islamic law in agricultural cooperation. There are habits that have been going on for generations. (2) The implication of muẓara’ah agreement on the economic life of farmers is the fulfillment of ḍarūriyyah’s needs, namely consumption and their education, while landowners can fulfill the fulfillment of ḍarūriyyah, can allocate a portion of funds to go on pilgrimage, charity and charity to others in need. And (3) the implications of muẓara’ah contract on Social life is the concern between landowners and farmers that is realized by helping each other when in trouble. However, attention from the government is still needed to ensure good relations between the two parties that are cooperating.
