

Improving the Ability of Students' Understanding Through Videos at PIAUD Study Program UIN Fatmawati Sukarno Bengkulu

Keywords: Learning Videos, Understanding, PIAUD Student

Online learning, conducted through the platforms such as the zoom, What's App, and e-learning, is unable to improve students' comprehension of the contents of lectures. The purpose of the study was to improve the ability of students' understanding at PIAUD Program UIN Fatmawati Sukarno Bengkulu by utilizing videos as learning media during the pandemic. The research method used was the quantitative one with an experimental approach. The sampling was 23 respondents of students at 6D class.

The data collection method used tests, questionnaires, interviews, and documentation. The test data collection instrument used pretest and post-tests. Instruments and data analysis of tests, questionnaires, and interviews assisted by the Google Forms. This study further used the analysis of descriptive quantifiable data.

The results of the research show

that the use of videos improved the understanding ability of the PIAUD students, and this was obtained from the analysis of student pretest value data before using learning videos at an average of 40.87%. Furthermore, there was an increase in students' comprehension ability at the average post-test scores after using learning the videos as learning media, which was 58.26%.

Peningkatan Kemampuan Pemahaman Mahasiswa Melalui Video pada Program Studi PIAUD UIN Fatawati Sukarno Bengkulu
